

Power to The World

INTERNATIONAL POWER

Generation Ltd

Production & Engineering

- **International Power Generation Ltd**, is a highly reputable manufacturing and trading company serving the power generation market. As the company name indicates we consider the world to be our market place, with over 75% of our business being conducted in the export market.
- At the Hull factory in East Yorkshire, we manufacture standard range generating units using selected engines from internationally renowned manufacturers such as Perkins, Cummins, Volvo & Lister.
- Projects requiring specially built units up to 2000 kW are also produced at the Hull works, while on larger diesel generator and steam turbine contracts we often engage a JV partner who will provide the manufacturing facility and work to our designs and requirements under our supervision.
- Our Project teams have worked in several Middle and Far Eastern markets as well as many territories on the African continent. Closer to home IPG equipment can be found throughout Scandinavia and the European Continent.
- International Power Generation Ltd can provide a total contract package, from site survey to design, manufacture and installation to the purchase & removal of redundant equipment from site.

New Build Gen Sets

Re-Engineering

- Along with the North Yorkshire works the company has an established operation in Doncaster, South Yorkshire where the service, repair and refurbishment of pre-owned plant takes place. We are proud of the flexibility and adaptability, which has and will continue to allow us to provide a rapid response to our customer needs.
- With experienced and skilled technical staff we are able to overhaul and maintain a large variety of equipment. Working closely with original manufacturers' a hallmark of our quality is guaranteed service we provide.

Pre-Owned Sales

- Based at Bolton, Greater Manchester our sales office specialises in satisfying the demand for high quality pre-owned generating sets
- Established worldwide contacts allow us to constantly monitor the supply of high quality standby generators, which may have become redundant due to the changing demands of their owners. As a result we enjoy a superior reputation as a supplier of pre-owned generating sets and power station equipment which we refurbish to a first class condition and supply to second users. The commercial advantages to our clients are obvious and there are many customers in the UK and overseas who have benefited from using our services.
- As well as an extensive range of diesel generators we also stock refurbished steam and gas turbines.
- In conjunction with our new equipment sales, we offer the added benefit of part exchange for all types of generators from 5Kva to 20Mva. By this method we can considerably reduce the capital outlay for the purchase of new plant for our clients.
